BULK SMS
— Solution —

SMS Marketing

What is SMS (Short Message Service)?

SMS is a short text messaging service that enables the exchange of brief text messages through mobile phones, web platforms, and network systems. It can deliver messages to almost any type of mobile device, regardless of the network or brand.

SMS is currently one of the most popular and effective communication channels. While the popularity of many other marketing methods has declined over time, SMS continues to be one of the fastest, most reliable, and most effective means of business communication.

When you send an SMS through our platform, it is automatically routed through the appropriate mobile operator and delivered to the recipient's phone. The entire process is completed within just a few seconds, ensuring that your important messages reach the intended recipient quickly and securely.

OUR SERVICES

Non-Masking SMS

Masking SMS

Flash SMS

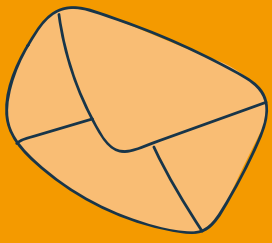

Push-Pull SMS

Short Code SMS

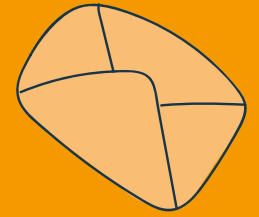

Voice SMS

OTP SMS

Non-Masking SMS

Through RT Communications' Push SMS platform, you can instantly send SMS messages to your customers using a designated non-name sender ID or long code.

It is a reliable solution for delivering promotions, notifications, updates, and other important information.

General (English) SMS

- ✓ Single SMS: Up to 160 characters
- ✓ Multiple parts: 153 characters per part
- ✓ Maximum length: Up to 1,530 characters (counted as 10 SMS messages)

Unicode (Bangla) SMS

- ✓ Single SMS: Up to 70 characters
- ✓ Multiple parts: 67 characters per part
- ✓ Maximum length: Up to 670 characters (counted as 10 SMS messages)

Masking SMS

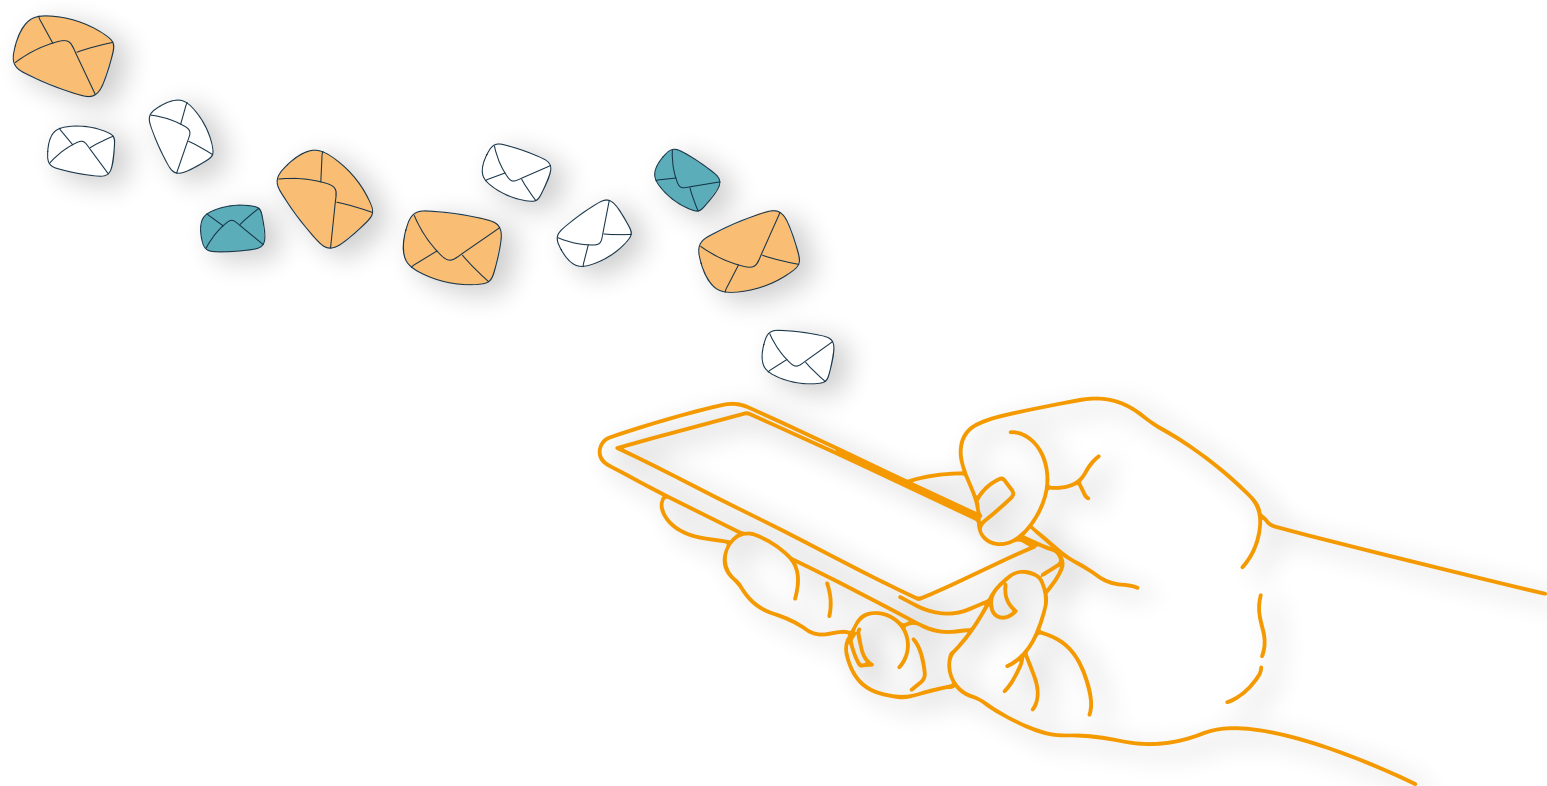

Through RT Communications' Masking SMS service, you can send SMS messages directly to your customers with your business, organization, or brand name displayed as the sender ID. It is a reliable solution for building brand credibility, enabling fast communication, and supporting effective promotional campaigns.

General (English) SMS

- ✓ Single SMS: Up to 160 characters
- ✓ Multiple parts: 153 characters per part
- ✓ Maximum length: Up to 765 characters (counted as 5 SMS messages)

Unicode (Bangla) SMS

- ✓ Single SMS: Up to 70 characters
- ✓ Multiple parts: 67 characters per part
- ✓ Maximum length: Up to 335 characters (counted as 5 SMS messages)

Flash SMS

Flash SMS is a type of SMS that appears directly on the recipient's mobile screen as soon as it is delivered.

Unlike regular SMS, these messages are not automatically saved in the inbox. This makes Flash SMS an effective solution for delivering OTPs, security alerts, urgent notices, and other time-sensitive information that requires immediate attention.

Push-Pull SMS

Push-Pull SMS is a two-way SMS solution that enables instant communication between businesses and their customers.

When a customer sends a specific keyword to a designated short code number, they automatically receive the requested information or response. It is an effective solution for information collection, service delivery, campaigns, and interactive communication.

Short Code SMS

Short Code SMS is an SMS service that uses a five-digit short number to enable fast, simple, and memorable communication.

Organizations use short codes for customer registration (opt-in), information services, voting, contests, coupons, subscriptions, and various interactive SMS activities.

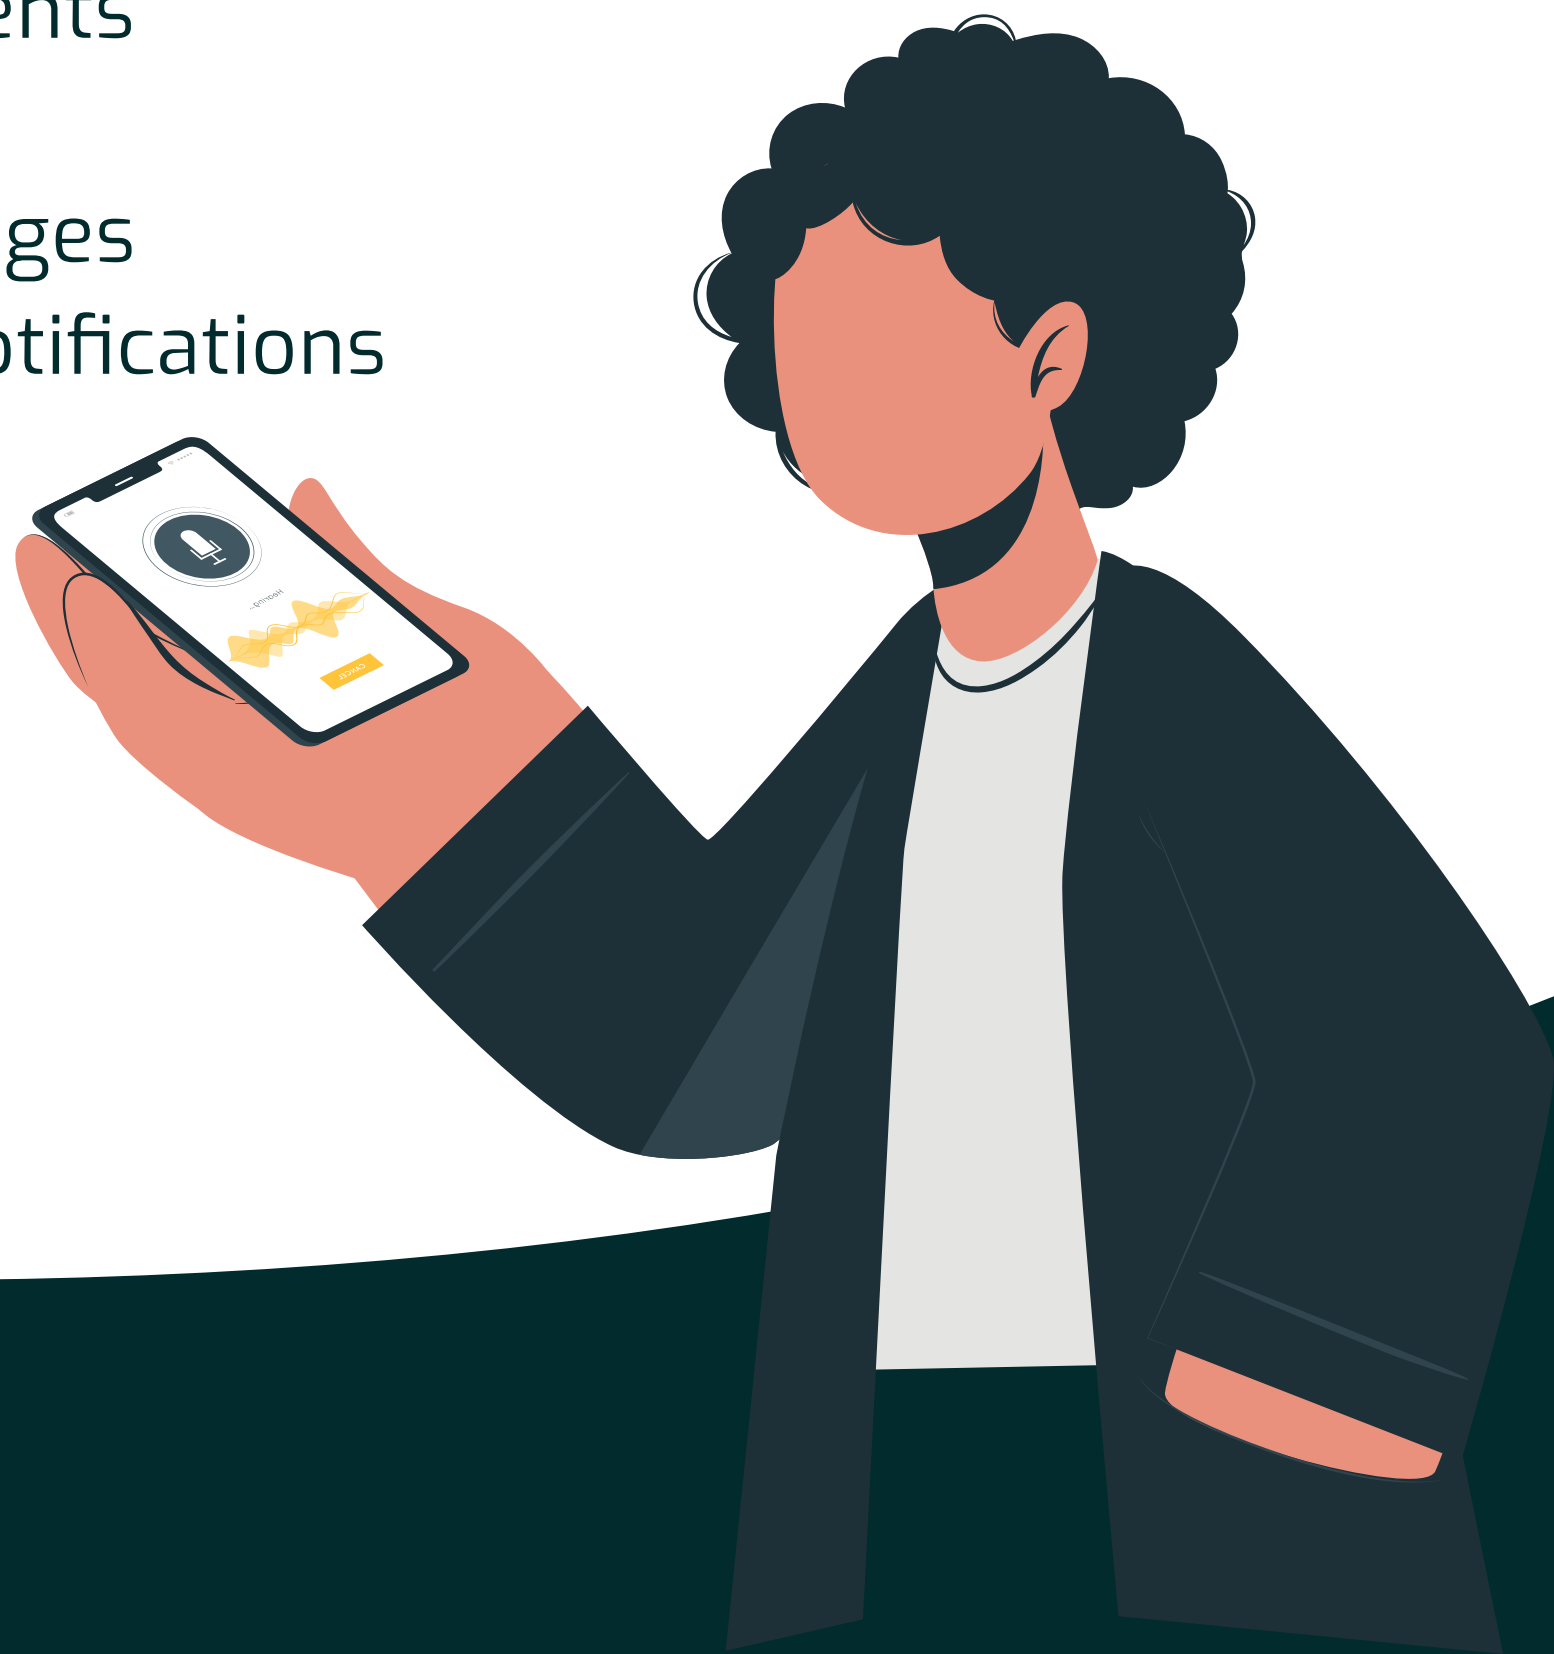

Voice SMS

Voice SMS is an effective communication channel that delivers pre-recorded voice messages directly to customers.

By communicating through voice, messages become more personal, clear, and engaging. It is a reliable solution for promotional campaigns, public awareness initiatives, emergency announcements, payment reminders, event invitations, and various customer service activities.

Ideal Use Cases

- ✓ Promotional and marketing campaigns
- ✓ Payment and bill reminders
- ✓ Emergency announcements
- ✓ Event invitations
- ✓ Public awareness messages
- ✓ Customer service and notifications

OTP SMS

One-Time Password (OTP) is a reliable solution for verifying user identities and ensuring the security of online transactions. It provides an additional layer of security for account verification, login, registration, and financial transactions.

SMS OTP

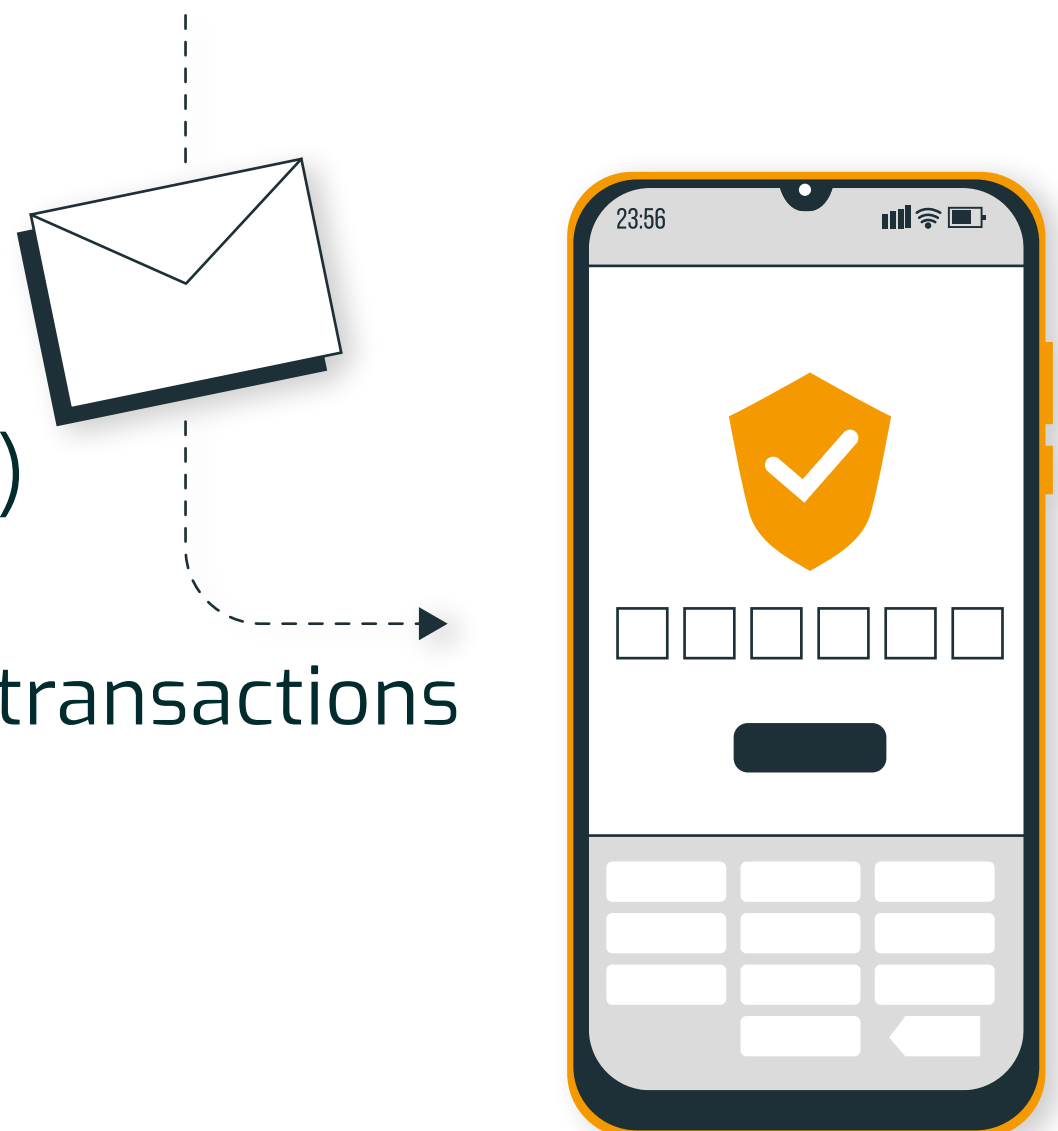

An OTP is sent to the user's registered mobile number via SMS. The user enters the code within the specified time limit to complete identity verification.

Voice OTP

Voice OTP delivers the OTP to the user through an automated phone call. It is an effective alternative when SMS delivery is unavailable or an additional verification method is required.

Ideal Use Cases

- ✓ Account registration and login
- ✓ Two-factor authentication (2FA)
- ✓ Password resets
- ✓ Online payments and financial transactions
- ✓ User verification

How to Send SMS

RT Communications offers multiple ways for businesses of all sizes to send SMS messages easily, quickly, and reliably.

Web Interface

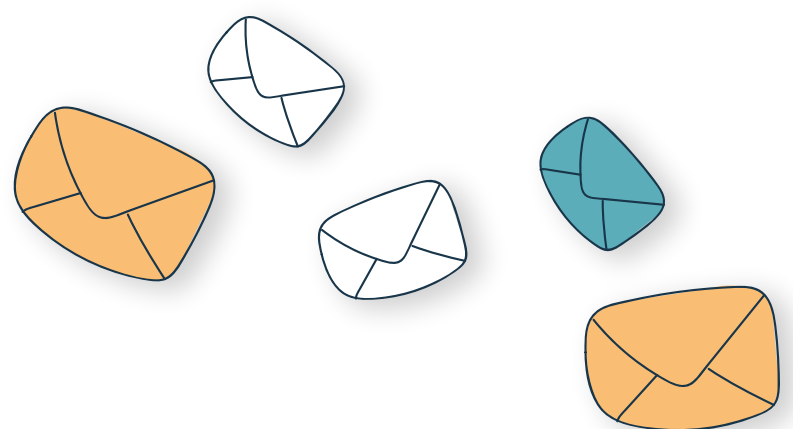

Send SMS effortlessly from a user-friendly web dashboard, manage contacts, and monitor delivery reports in real time.

API Integration

Integrate our API with your website, application, or ERP/CRM system to automate SMS delivery and streamline your business processes.

Call Center Integration

Integrate RT Communications' SMS service with your call center software to automatically send notifications, OTPs, follow-up messages, and other customer service communications.

Telecom Integration

RT Communications ensures direct and seamless integration with all mobile operators in Bangladesh. This enables us to deliver SMS services with speed, reliability, and high delivery rates.

Our Connected Operators:

Key Benefits

- ✓ Reliable SMS delivery across all mobile operators
